DETAILED ACTION

Response to Amendment

1. Applicant's amendment filed February 27, 2007, has been entered. Claim 1 has been amended as requested. Claims 15-33 are cancelled. Thus, the pending claims are 1-14.
2. Said amendment is sufficient to overcome the prior art rejection based upon the Gray patent (US 4,897,989) set forth in section 4 of the last Office Action (11/30/06). Specifically, applicant has amended the claims to limit "at least some of said tufts *consisting of* groups of continuous filament non-textured fibers." Since Gray requires tufts of a three-ply yarn comprising one textured yarn and two non-textured yarns, said amendment renders the claims nonobvious over Gray.
3. Despite this advance, the claims are not patentable for the reason set forth below.

Claim Rejections - 35 USC § 112

4. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.
5. Claims 1-14 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claims contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. Claim 1 is drawn to a fabric comprising a base and pile, wherein said pile comprises at least some tufts consisting of groups

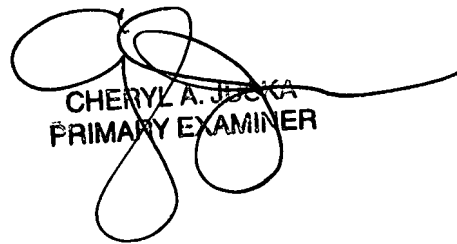

of continuous filament non-textured fibers. Claim 1 also limits the tufts to providing a certain degree of surface coverage. However, according to the specification (sections [0015], [0017], and [0033]), said coverage property is not descriptive of the “non-textured fiber” tufts, but rather said “non-textured fiber” tufts that have been subjected to a treatment in order to become self-bulking (i.e., shrunk and bloomed) fibers. In other words, the first part of claim 1 describes the intermediate product prior to self-bulking, while the latter half of the claim is descriptive of a final self-bulked product. Note the accepted definition in the art for a bulked yarn or fiber inherently includes a textured yarn or fiber. [See page 194, *Introductory Textile Science*, 5th ed., M.L. Joseph.] As such, the final product having the claimed degree of surface coverage inherently includes a *textured* fiber, which is contrary to the claimed intermediate product. Therefore, claims 1-13 are rejected as being non-enabled.
